1979 Article Index

January

Wiredrawing dies: the 1979 economics—Leonard A. Zucker 52
Direct casting of wire, filament and fiber—Robert E. Maringer and Carroll E. Mobley 70
The theory of lubrication—Brian F. Smith and Allen Cooper 76
Unconventional methods of testing wires and wire ropes—Marek J. Bergander and Tadeusz Golosinski 82
Filtration of aluminum wiredrawing oils—James Joseph 88
The consequences of hard metric conversion of magnet wire dimensions—Evert A. Mol 94

February

The latest on measuring, testing and inspecting 44
Refrasil in the steel industry—Christian D. Nelson 62
A new generation of filled core cable—Thomas K. McManus and R.E. Beveridge 66
Development experience with the Conform continuous extrusion process on copper—H. Keith Slater 76
Purchasing strategy: managing the procurement process—Henry Z. Mohrer 86

March

Control of steel wire temperature during drawing by evaporative cooling (the Hidon micro-mist system)—Rodney Phillips, Mike J. Kelly and Mike Hurst 50
Analysis of wire temperatures and power requirements on multipass drawing productivity—Norman A. Flanders and Errol M. Alexander 60
Discussion on Flanders-Alexander paper—Howard J. Godfrey 65
Author's reply to Godfrey's comments 67
A new vulcanizing process without steam as heat source—Dexter C. Seymour and David A. Krick 74
Cold rolling—an ideal application for cemented carbide—Peter Sandell 82

April

Cleaning extruder hardware with fluidized beds—Patrick H. Summers 60
Enamel extruded on magnet wire speeds throughput—Eberhard Kertscher and Bruno Schmidt 64
New insulation for modular telephone cords—William C. Vesperman and Max K. Wilson 70
A theory of compact sector stranded conductors—Robert Di Leonardo 76
Scrap as a product—C. Dan Smith 82
Resistance upset butt welding of conductor for transformer coils—Thomas C. Junk 86

May

Kerite Co. celebrates 125th anniversary 52
Manufacturing of wire rod for drawing without descaling—Osamu Miki, Sumihide Fujii and Masahiko Uemura 56
Scale and mechanical descaling of steel wire rod—Michel Baroux 62
A new descaling machine—Jean Bernot 71
PLCV: progress report no. 1—Gerald Smart 74
Raw material supply a headache for some; higher prices plague all ... 84

June

A new range of stainless steel spring grades—Nils-Gunnar Malmgren and Barry Solly 52
Continuous chemical surface treatment of wires according to the MDA-process—Gabor Koreny and Hans Jedlicka 58
The effect of solidification rate on the properties of Al-Fe-Co (Super-T®) conductor alloy—E. Henry Chia 66
Experience with Selee® open pore foam structure as a filter in aluminum continuous rod casting and rolling—Torben Pedersen, Robert C. Balhiser, Donald A. Bates and James E. Dore 74
Resin socketing for wire rope attachments—David W. Gathman 82

July

Response of high-carbon wire to heat-treatment—Herbert Beck and Wolf-Dietrich Brand 66
Newly developed continuous curing process for rubber and XLPE insulated and sheathed cable—Shigemichi Teramura, Tadaaki Kuhara, Toshiaki Nakao and Syoji Tomioka 72
Computer-aided C.V. process modeling for rubber insulated wire and cable—E. Alan McCaslin 78
Production of wire rod from continuous cast billets at Hamburger Stahlwerke—Eckehard Foerster, Dieter Ameling, Michael Klemm, Karl Stercken and Klaus Theis 84
What's new in wire machinery? 98

August

BHS completes first wiredrawing machine 56
A skip-closing machine capable of manufacturing steel wire ropes of a unit mass of 50 tons—Maurice Gressier 58
Electrically heated patenting furnaces—Hans Hugdahl 62
Copper drawing lubrication—an interfacial problem—Reinmar Peppmoller 68
Basic considerations in drawing non-heat-treatable aluminum alloys—Darryl L. Zini 74
Flat wire: update on a versatile material 80

September

High strength-high conductivity Amzirc® copper and Amax-MZC® copper alloy—Pierre W. Taubenblat, Virgil J. Marino and Ravi Batra 114
High strength, high conductivity copper alloy wire, C196—Ralph E. Willett 124
CR-155: a new high-conductivity, high-strength copper for the wire industry—Donald A. Hay and Peter T. Gregg 132
PD-135: a high-conductivity, high-strength, high-ductility, high copper alloy—Harry M. Specht 138
Microprocessors as control instruments in cable jacketing lines—Klaus Koch 146
A high-yield approach to cold-heading—Neil Bowers 156
Make the best of your strander with a strander slide rule—Robert W. Scudder 165
'Bethalume'—Bethlehem's aluminum coated steel wire—C. Edwin Youngblood 172
Solid welding wire use keeps pace with fast growth in Mig process . 184
How two firms conserve energy 188
Wire manufacturing and auto racing share coatings technology 192

October

World trade: its effect on the wire industry—Ron Elkington 48
Mechanical analysis and die design—Roger N. Wright 60
Single-twist bunching—Frederic B. Krafft 66
Frictional properties of solids and their effect on wire coating—Imrich Klein 72
Twisting machines—a second look—I. Jack Diamond 78

November

Newly developed wire rod for non-heat-treated high tensile bolts—Katsuyoshi Kajiyama, Akira Aida, Michitaka Fujita, Tetsu Ohno and Kenji Aihara 66
Implementation of a Material Requirement Planning system—Bard Snilsberg 74
Technical experience in the continuous heat treatment of wire—Marc Moreau 80
The availability of natural diamonds for wiredrawing—Harold A. Sher 86
What's your closely held company worth?—Paul E. Orr, Jr. 92
Impact of new technologies on the wire and cable industry—Konrad C. Schillebeeckx 98
Influences on world trade in the wire industry—Ron Elkington 102

December

A profile: Engineer Allan Dove adds to his honors 55
Microrolling: cold rolling wires of unusual diameters—Giulio Properzi 58
Investigation of the relationship between carbon and sulphur segregation and the drawability of high carbon steel rod—Lyndon Edwards, Michael K. Miller, Peter R. Williams and George D.W. Smith 68
Laboratory methods for assessing the drawability of mild steel wire rod—Michel Baroux 74
Descaling by bending and wet scale blasting—Jean Bernot 80
